Deskpins is a free tool for Windows that gives you the means to have one or more windows in constant view on the desktop, so that it is possible to access them as quickly as possible.. Nothing is ship to correct address. Clicking on the icon of the system tray, you 'grab the tab' Once you have it, you just click on the title bar of the window you want to fix in place to place the tab.. Those of us who often work with a large number of open windows on our desktop sometimes get annoyed by having to look for the windows we need at that moment, especially if we use them a lot and have to minimize a large number of windows just to have another one in view.
